Profile

After having graduated from a Law school and worked as a lawyer, I decided to shift my career to the technology area.

I've been in the development field since early 2019, after participating in a frontend bootcamp and learning the basics of HTML, CSS and Javascript.

In 2020, I started working with Angular, Node and Android Development. Which led me into knowing Kotlin, a language which I have been focused on furthering my mobile development skills. Alongside Android, I've been working with MVVM architecture and Kotlin programming language.

Experience

Android Developer Jr.; C6 Bank — 2021 - present

C6 bank is a digital bank with more than 10 millions of clients. As an Android Developer I have been working at the cards team, where we are responsible for the development of new features and bug fixing.

Android Developer Jr.; Raízen/ShellBox — 2020 - 2021

ShellBox is a fuel payment application. As a developer I have participated in a multidisciplinary team using Angular as a web framework for front end projects, Java and Kotlin for Android projects and Node for back end projects. I have worked most of the time in Android demands, where I had the opportunity to work on a mobile app from scratch for internal usage.

Education

Software engineering - Pontifical Catholic University of Minas Gerais — Specialization, 2022
